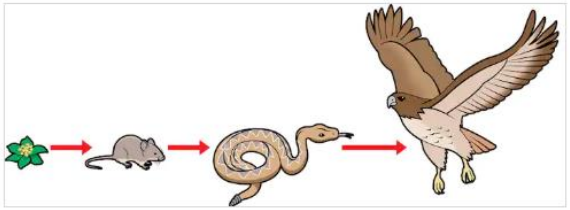
Living things and their habitats

Biology

I should already know:

- the names of a variety of living things
- that all living things have a habitat
- that some animals eat meat, plants or both

food chain



predator

prey

habitats

Vocabulary	
habitat	A place where a person or animal lives
microhabitat	A place where insects live
food chain	Shows how each living thing gets food, and how nutrients and energy are passed from creature to creature
predator	An animal that eats other animals
prey	An animal that is eaten by another animal

By the end of the unit I should know:

- the differences between things that are living, dead, and things that have never been alive
- that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other
- name a variety of plants and animals in their habitats, including microhabitats
- how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food
